**The Recipe for Success for High Hygiene Standards!**

**FUNK**®  
KÄLTE MIT SYSTEM

Ice-Cold for Hygiene

## THE SITUATION: CONTAMINATED SCALE ICE?

Whether to cool dough or sausage meat, for processing, transporting and preserving food, or for decorating buffets: its special characteristics make scale ice an important tool in bakeries, butchers, shops and restaurants. Naturally, high hygiene standards are required.

Outwardly the little pieces of ice often only appear pure and white: without regular and thorough cleaning, the inside of a scale ice machine becomes a playground for hidden contaminants of every kind.

**An explosive problem often reveals itself during servicing:**  
the water trays and evaporators of scale ice machines are often heavily contaminated.

## THE PROBLEM: A LOT OF EFFORT, LITTLE EFFECT!

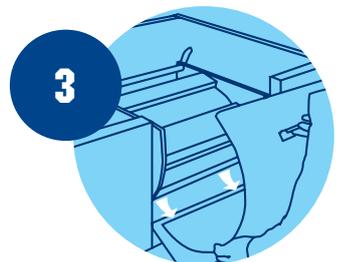

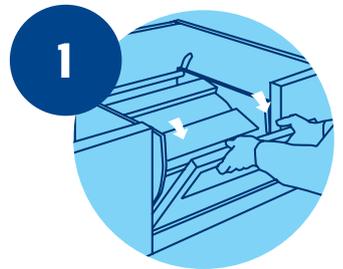

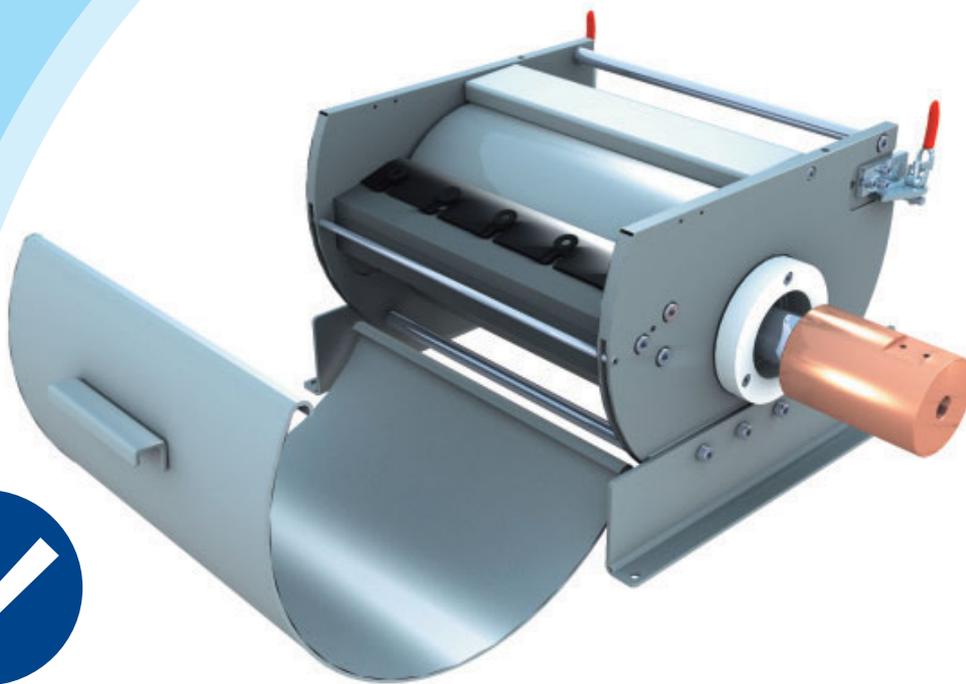

The reason for the discrepancy:  
mechanical cleaning of conventional scale ice machines mostly consists of numerous steps.

Although this is time-consuming, the result is usually unsatisfactory: a careful, effective clean of all hygiene-sensitive components is not guaranteed.

# Funk EasyClean®

## THE SOLUTION: A MODEL FOR HYGIENE!

Our scale ice machines work with the patented **Funk EasyClean®** principle: with this innovative system, you are providing optimal hygiene for scale ice production.

## THE PRINCIPLE: HYGIENE – IN THE BLINK OF AN EYE!

The hygiene-sensitive water basin is easily removed: thanks to the Funk EasyClean® principle, cleaning a FUNK® scale ice machine is no longer a problem.

All components of these machines are easily accessible, quick to clean, service or repair. You gain competitive advantages, save valuable time and costs.

### Three quick steps to optimal hygiene:

1. Open front flap
2. Lift tension lever
3. Remove water basin

## YOUR ADVANTAGES:

Scale ice machines that work with the innovative Funk EasyClean® principle offer you numerous, decisive advantages:

- All the machine's components can be accessed quickly and easily.
- Regular cleaning of the scale ice machines becomes child's play: saving you labour, time and money!
- The side panels, cover and water basin of each machine are made of high-quality stainless steel and thus, offer high corrosion protection. The evaporator drum has aluminium cladding, but can also be clad with stainless steel on request.
- You achieve optimal hygiene standards in your production.

High corrosion protection: side panels, cover and water basin made of high-quality stainless steel; on request the evaporator drum can also be clad with stainless steel.

All components can be accessed quickly and easily.

## YOUR PARTNER:

Our family company was founded in 1984 by Dieter Funk. We offer our customers efficient, innovative solutions for the production of scale ice, for every requirement, for every area of application – from planning, production and installation to servicing the machines.

**We developed Funk EasyClean® in 2001. This successful easy cleaning principle achieved its European patent in August 2005.**

Our new Event Centre with around 500 m<sup>2</sup> will offer sufficient space for product training and many other services.

Technical and constructional modifications reserved.
